raise

User Journey Maps

These are the three journeys the brief asks for: a parent's first time using Raise, preparing for one conversation, and what happens after a conversation goes badly. They show the rebuilt app. For each step I show what the parent does and thinks, what gets in her way, what Raise does, and the event I count. Evidence is from my research form (28 parents, 15 teenagers) and 31 interviews.

The whole flow

Journey 1: First time, from link to plan

	Hears about Raise	Opens it	Picks a topic	Answers the questions	Reads her plan
Doing	Gets a WhatsApp link from me or a parent she knows	Reads the home screen	Taps one of five topics	Taps whether she tried before and how she feels, types or says her concern	Reads the plan
Thinking	"Who is this, and will it judge me?"	"Is this for me?"	"Which one is mine?"	"What if I say it wrong?"	"Could I actually say this?"
What gets in the way	Distrust of an unknown link. 39% worry about the privacy of what they type	Unsure it is for parents	Fear of labelling her child	Describing a hard moment feels exposing. 13 of 28 named fear of saying it wrong or embarrassment	A plan that is too long or reads like a script
What Raise does	One promise and a privacy line	"For parents of teens · 14–18", no sign-up	Five plain topic names	One required tap. The rest are chips, voice, or skippable	One plan on one screen, her answers played back
What I count	Not tracked	`topic_selected`	`topic_selected`	`intake_completed`, target 90% of topics started	`plan_generated`, target 98% of intakes completed

Journey 2: Preparing for one conversation

	Reads the plan	Edits the words	Chooses the moment	Saves	Has the conversation	Comes back
Doing	Reads four short parts and up to three likely reactions	Changes the opener, swaps the style, writes her own, or asks for another approach	Picks one of three settings, or adds her own	Taps Save, optionally picks today, tomorrow or another time	Raises it, or doesn't, away from the app	Opens her saved plan and taps how it went
Thinking	"That sounds careful, not preachy"	"That's almost how I'd say it"	"Not at the dinner table"	"I'll do it this weekend"	"Not now, she's tired"	"At least it's written down"
What gets in the way	Fear of closing the door	Words feel unnatural	A busy house with no quiet moment	Saving feels like a promise	Putting it off again	Describing something that went badly
What Raise does	A tentative reading ("one possibility is…") and no prediction	The opener is editable and labelled "edit these words to sound like you"	Three suggested settings and an "Other" she can fill in	The intention is optional. The app says "Plan saved", never "done"	A "not now" response is in the plan, and a card says to come back after she talks	One tap for the outcome, with no form first. A bad outcome counts if the account is specific
What I count	`plan_generated`	`opener_edited`, `alternative_requested`	n/a	`plan_saved`	Not tracked, it happens away from the app	`outcome_selected`
Target	n/a	Opener edited or another approach asked in 40% of plans	n/a	70% of plans generated	n/a	50% of saved plans choose an outcome, within 14 days

Journey 3: After a conversation goes badly

5 of 28 parents had tried and it went badly, so this journey is about 18% of the parents I spoke to. One of them said: *“I have tried talking about it, but it didn’t go well. Sometimes I feel like I should bring it up again, but I don’t know how to approach it differently.”*

	It stalls	She feels she failed	Comes back	Taps how it went	Gets a follow-up and a choice	Rebuilds, or waits
Doing	The teenager goes quiet, says not now, or gets irritated	Puts the phone down and tells no one	Opens her saved plan from Your topics	Taps “They weren’t ready” or “It didn’t go well”	Reads the follow-up lines and picks one of three choices	Rebuilds the plan, tries the same plan another day, or comes back later
Thinking	“I ruined it”	“She’ll never talk to me”	“Is there another way?”	“At least I only had to tap”	“That’s different from what I said”	“Maybe next weekend”
What gets in the way	Guilt and anger	A belief that it is hopeless	Fear of being judged	Describing a failure	Not knowing what to say next	Putting it off again
What Raise does	A “not now” response was already in the plan	Nothing scores the attempt. There is no streak and no count of failures	The plan is saved on her phone and “How it went” is one tap	One tap, no form first. “I haven’t talked yet” is a fine answer with no deadline	Fixed lines she can use today (“a not now is not a no”) appear at once, with no wait for the AI	The rebuilt plan starts from what happened, raises “tried before” by one, and has a short follow-up note at the top. A fuller repair flow with words for apologising is planned for v2
What I count	n/a	n/a	n/a	`outcome_selected`	`next_step_chosen`	`plan_generated` (rebuild), `plan_saved` with `retry_of`
Target	n/a	n/a	n/a	n/a	n/a	Rebuild rate and completion for “tried before” reported separately

Where I expect to lose parents

At my planning targets, 100 parents starting a topic would look like this. The biggest loss I expect is after saving, when she has to come back on her own.

Step	Target	Parents left
Start a topic		100
Finish the questions	90%	90
Get a plan	98%	88
Save it	70%	62
Come back within 14 days	50%	31
Give two or more specifics	70%	22
